Civil engineering graduate studying for an MSc in Applied AI for Business, with finance analytics experience at Shopee and a portfolio of data projects built around commercial decisions: which accounts to call first, which customers are worth keeping, and what a valuation actually rests on.

Education

Henley Business School (Reading) – MSc Applied AI for Business	Expected Sept 2027
The University of Nottingham Malaysia – BEng Civil Engineering	July 2025
Subjects: Engineering Mathematics, Engineering Management, BIM	
Gamuda AI Academy – Trainee	May - July 2025
Fullstack Web Development + AI	

Professional Experience

Shopee Malaysia – Business Finance Analyst	Oct 2025 - Feb 2026
● Collated and organized 1 year's worth of financial data for 7,000 sellers into ADGMV (Average Daily Gross Merchandise Value) calculations with breakdown by category, using SQL and Excel. ● Maintained the ADGMV dashboard that supplied findings and outlying data for the finance lead's weekly stakeholder meetings.	

Projects

UK Tech Outbound

- **Built a transparent four-component scoring model** over the Companies House register, narrowing 5.7 million UK companies to 136,542 property developers ranked by industry fit, company stage, financial substance and filing health.
- **Turned the ranking into outreach** with three outbound emails to the top accounts, each citing a specific fact about the company, backed by a tested Python/pandas pipeline.

Ecommerce Data Analytics

- **Designed an end-to-end ETL pipeline** to clean and analyze 541,909 transactions from a UK online retailer selling to 38 countries, using Pandas, Matplotlib and Seaborn.
- **Modeled customer lifetime value and churn** to flag customers about to stop buying, and benchmarked the churn model against a naive rule to test whether it justified its cost.

Financial Analysis

- **Compared Tesla, BYD and Ford** from SEC EDGAR filings (2022–2024) on earnings quality, free cash flow and valuation, finding Tesla priced at about 189x earnings despite the lowest free cash flow of the three.
- **Built a reusable Python EDGAR client** with unit tests to pull filings and convert figures to a common currency, and wrote an investment thesis from the results.

Student Engagement Analysis

- **Found early online course activity to be a usable early warning sign** for withdrawal, using logistic and linear regression (statsmodels) on 27,526 Open University student records: moving from the lower to the upper quartile of first-month activity was associated with 5 points lower withdrawal and a 16 point higher pass rate.
- **Guarded against misleading results** by excluding 5,067 students who withdrew before engagement could be measured, and adjusting for deprivation, prior qualifications and course, with results reported as odds ratios.

AI Interior Design Web App

- **Engineered and launched** a full-stack AI interior design application, by developing over **20 RESTful API endpoints**

with Python/FastAPI and a **dynamic Vue.js/Vuetify frontend**.

- Developed the **core generative AI engine**, trained on a dataset of over **500 furniture models**, capable of producing unique and realistic room layouts **in under 10 seconds**.

BEng Coursework - Structural Design & BIM

- **Designed and analyzed structural solutions** across three team projects, from a 100m motorway bridge to a 5-storey, 250-room steel-framed student residence, validating calculations with a tested scale model.
- **Coordinated multidisciplinary BIM models** in Revit, Civil3D, Robot and Navisworks, including clash detection and BIM Execution Plans aligned with ISO 19650.

Extra-Curricular Experience

President, Project Management Youth Society - University of Nottingham Malaysia Sept 2023 - May 2024

- **Led a committee of 5 people** to meet recruitment and event targets set by our society advisor
- Responsible for **directly liaising between University Faculty and PMIMY** (Project Management Institute Malaysia Chapter)
- **Coordinated on-campus events** involving PMIMY representatives

Course Representative, Civil Engineering 3rd Year - University of Nottingham Malaysia Sept 2024 - May 2025

- Represented coursemates and **acted as a liaison** between students, university departments, and the Student Association to **ensure effective communication**.

Skills

Data & Analytics: Python (pandas, statsmodels), SQL, Excel, Power BI, Tableau, MatLab

AI: Google Cloud Platform (VertexAI, Gemini), Claude Code

Web Development: Vue.js/Vuetify, Next.js, FastAPI, MongoDB, Firebase

Engineering & BIM: Autodesk Revit, Civil3D, Navisworks, Robot, AutoCAD, Fusion360

Project Management: Microsoft Project

Certification

Google Data Analytics Professional Certificate 2023

Additional Information

-
- Interests: Aerospace and Defense, Geopolitics, Manufacturing & Industry, Artificial Intelligence and Consumer Electronics.
 - Native English fluency, conversational proficiency in Mandarin Chinese and Bahasa Melayu.
